

Signed block sampling: $g_n = \max(|a_n|, |a_{n+1}|)$, $Q = 1/64$, $\alpha = 1/20$

$$a_n = \operatorname{Re}((3/10 + 2i/5)^n)$$

$$a_n = \operatorname{Re}((i/2)^n)$$

— block norm g_n ○ first block crossing ν_j ◆ selected scalar $a_{v_j + k_j}$

Shaded bands are $\alpha Q^j < |a| \leq Q^j$. Circles mark block crossings; diamonds mark actual sequence terms.
